

# Session 4: Data Management Workshop

Thomas Ganslandt, Geun-Hyun Kim

Erlangen University Hospital (UKER), Dept. of Medical Information & Communication

This project has received funding from the European Union's Horizon 2020 research and innovation Programme under grant agreement 945263 (IMMERSE)

# Workshop Content

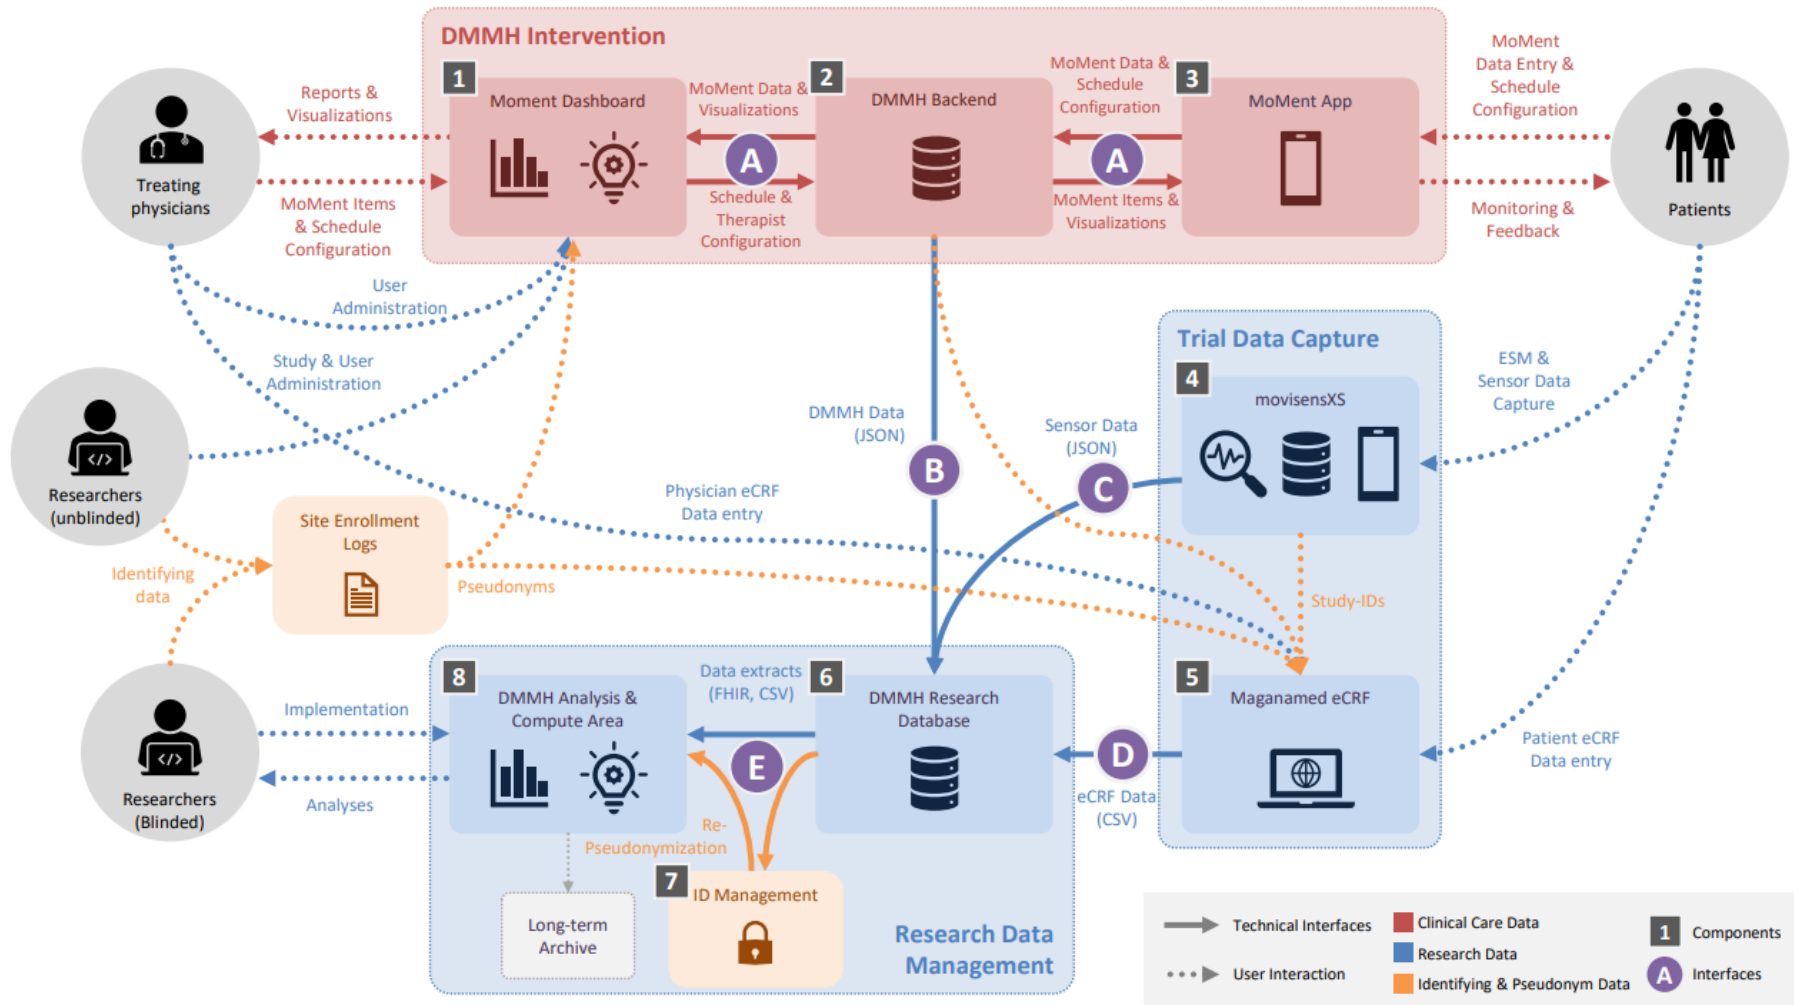

- 1. Data Management Architecture**
- 2. Data Availability**
- 3. Dummy Data**
- 4. Data Use Process**
- 5. Research Data Management: Next Steps**

This project has received funding from the European Union's Horizon 2020 research and innovation Programme under grant agreement 945263 (IMMERSE)

# Data Management Architecture (1)

This project has received funding from the European Union's Horizon 2020 research and innovation Programme under grant agreement 945263 (IMMERSE)

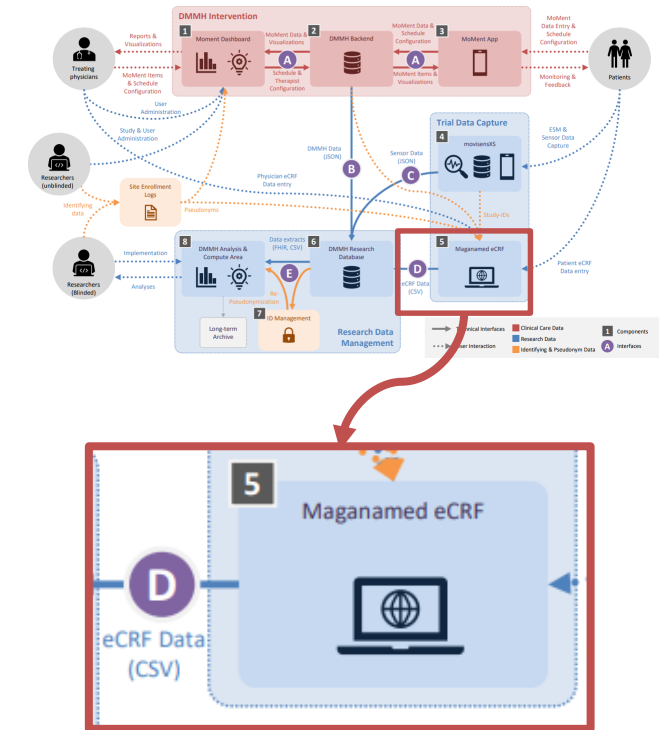

# Data Management Architecture (2)

## MaganaMed

- Content: Participant eCRFs
- Status: interface in production use
  - weekly manual exports & backup at UKER
  - extraction & transformation of data dictionary
- Formats:
  - source: CSV (1 file per questionnaire)
  - available: CSV
  - dummy data available (CSV)

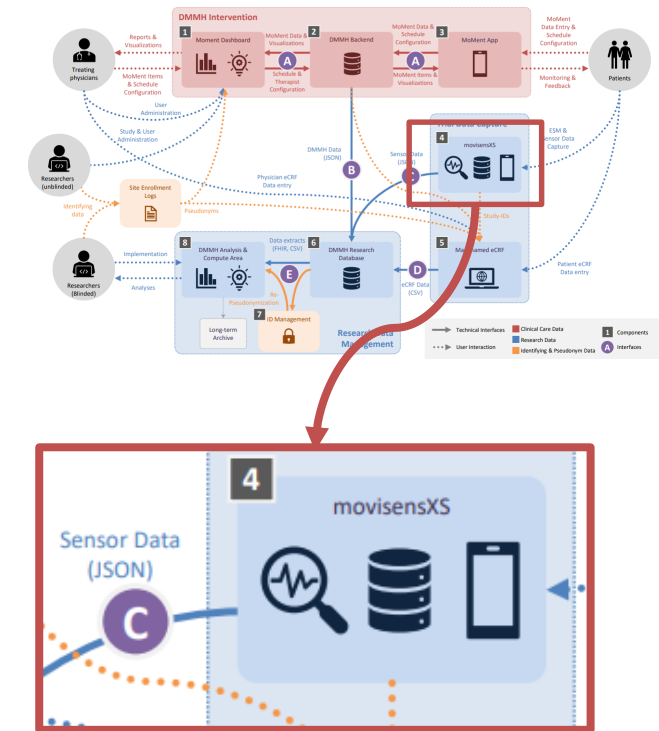

# Data Management Architecture (3)

## movisensXS

- Content:
  - sensing data (7 modalities)
  - ESM & fidelity forms
- Status: interface in production use
  - weekly manual exports & backup at UKER
- formats:
  - source: CSV (sensing, 1 file per modality/participant), JSON & Excel (ESM & fidelity)
  - available: CSV, Excel
  - dummy data: available for ESM forms (CSV)

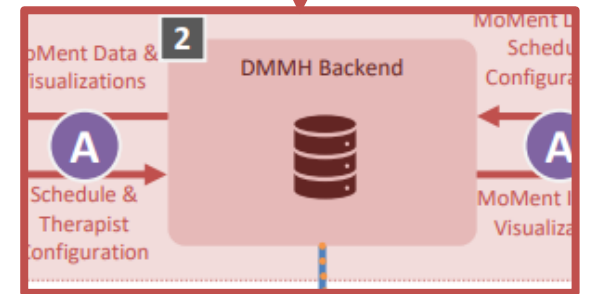

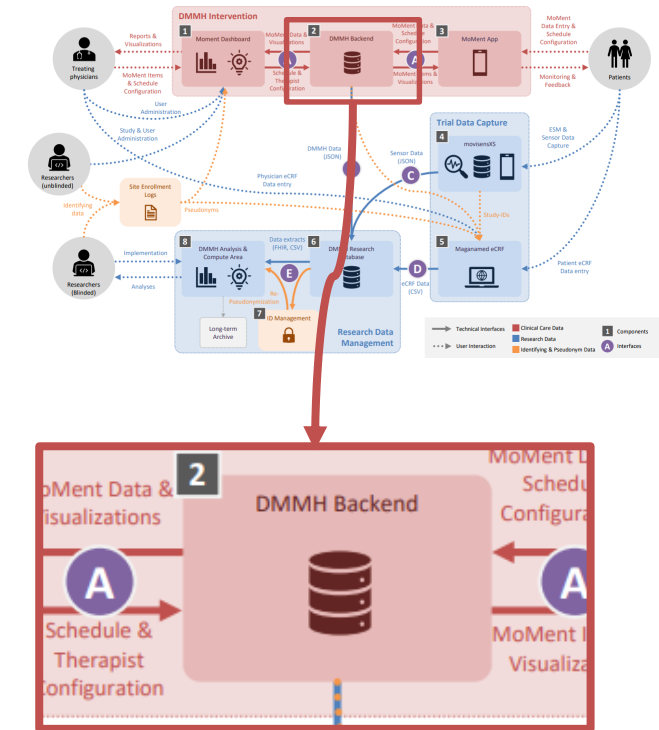

This project has received funding from the European Union's Horizon 2020 research and innovation Programme under grant agreement 945263 (IMMERSE)

# Data Management Architecture (4)

## TherapyDesigner/MoMent

- Content:
  - primary ESM forms
  - prompt & usage data
- Status: interface still to be implemented
  - manual exports available on request by movisens
- formats:
  - source: JSON (metadata file + 1 file per site)
  - available: CSV
  - dummy data: not yet implemented

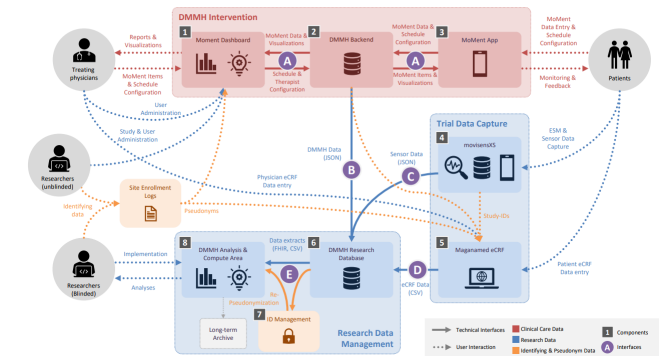

# Data Management Architecture (5)

## Additional Data Sources

- Phase I REDCap eCRF data
  - available in REDCap source systems
- Phase I Qualitative Data
  - available in Erlangen (de-identified transcripts, QPDX files)
- Erlangen REDCap
  - used for trial coordination
  - weekly manual export
  - CSV files (1 per site & eCRF)

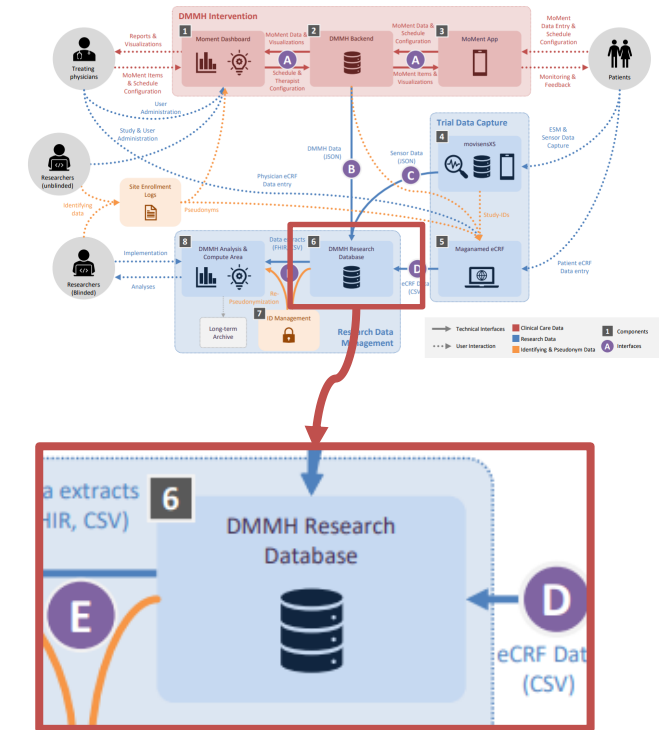

# Data Management Architecture (6)

## Research Database

- Content:
  - collection of data from all IMMERSE sources
- Status:
  - file-based exports from source systems
  - import of MaganaMed data into SQL database in production
  - import of TherapyDesigner data in development
- formats:
  - source: JSON (metadata file + 1 file per site)
  - available: CSV
  - dummy data: not yet implemented

This project has received funding from the European Union's Horizon 2020 research and innovation Programme under grant agreement 945263 (IMMERSE)

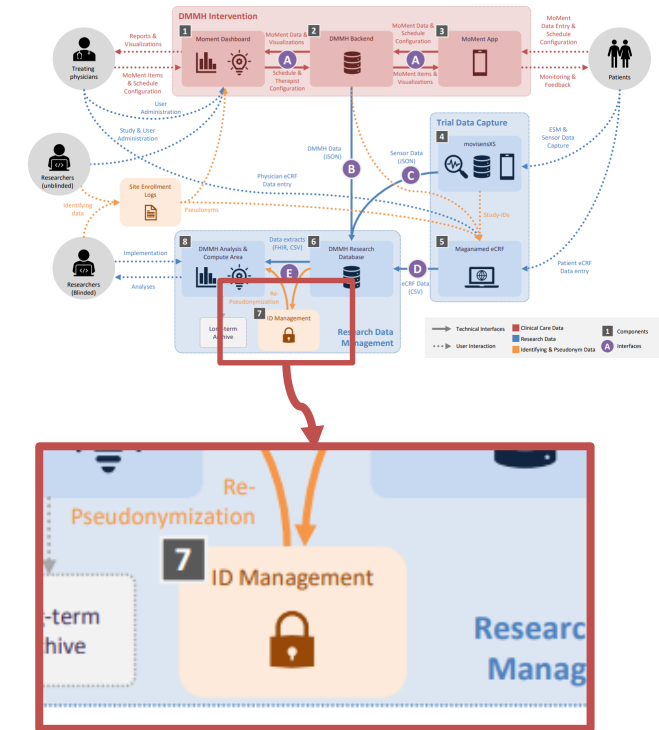

# Data Management Architecture (7)

## Pseudonymisation

- Purpose:
  - secondary pseudonymisation of datasets for analysis
- Status: in production use
- concept:
  - carried out by independent trust center of UKER using gPAS software
  - replacement of original study pseudonyms with individually generated set of random IDs for each data use project
  - assignment list is used by WP3 only during data preparation
  - assignment list is archived by trust center for legitimized access

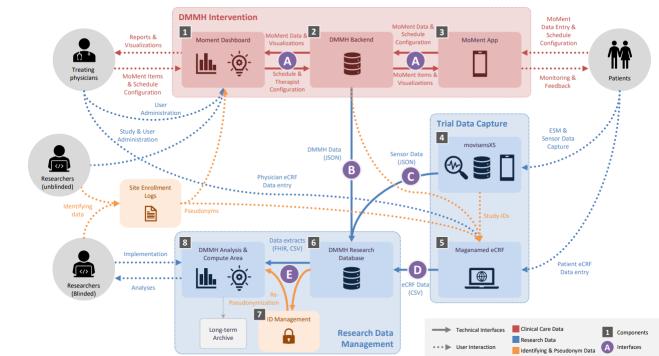

# Data Management Architecture (8)

## Additional Infrastructure

- UKER Cloud
  - shared data space hosted securely at UKER
  - ingest of data provided by other partners (e.g. Phase I data)
  - provision of exports for data use projects
- Status Dashboard
  - graphical overview of data entry status by site & eCRF
- Dummy data
  - “fake” datasets to be used for analysis script development
  - based on trial metadata (e.g. MaganaMed data dictionary)

# Data Availability (2): MaganaMed Visite/Form vs Site

This project has received funding from the European Union's Horizon 2020 research and innovation Programme under grant agreement 945263 (IMMERSE)

# Data Availability (3): Structure of MaganaMed Exports

**Default value  
of answer**

**Question type**

# Dummy Data (1)

## Intention

- provide early access to similarly structured datasets to enable analysis script implementation
  - circumvents data protection & trial pre-clauseout issues

## Method

- based on metadata of actual datasets (e.g. MaganaMed data dictionary)
- data items are filled with randomly chosen values from the respective set or missings

# Dummy Data (2)

## What it can & can't do

- data is identically structured to the real data & syntactically correct
- however, the data is not at all medically plausible
  - it does not reflect frequencies or correlations from the original data
- data can be used to develop & test analysis scripts regarding correct implementation
  - analysis results of dummy data will of course not reflect content of the actual data

## Availability

- currently available for ManaMed eCRF and movisensXS ESM data

# Data Use Process (1)

This project has received funding from the European Union's Horizon 2020 research and innovation Programme under grant agreement 945263 (IMMERSE)

# Data Use Process (2)

Pre-registration of draft proposal

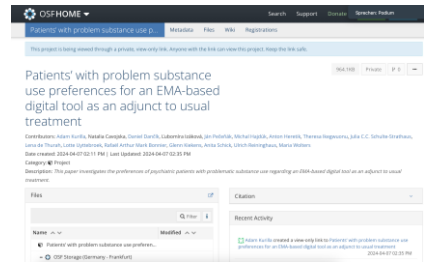

Pre-approval by DGB

Pre-registration of full proposal

Approval by DGB

- Commenting by participants
- preliminary data availability check by WP3

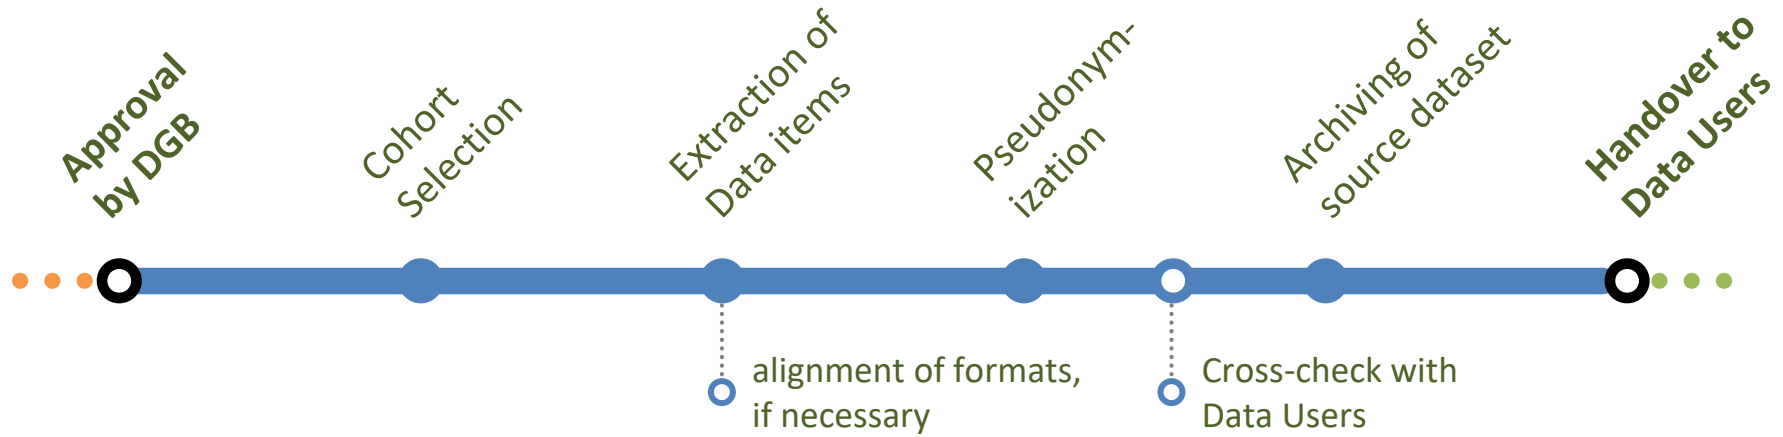

- Commenting by participants
- final data availability check by WP3

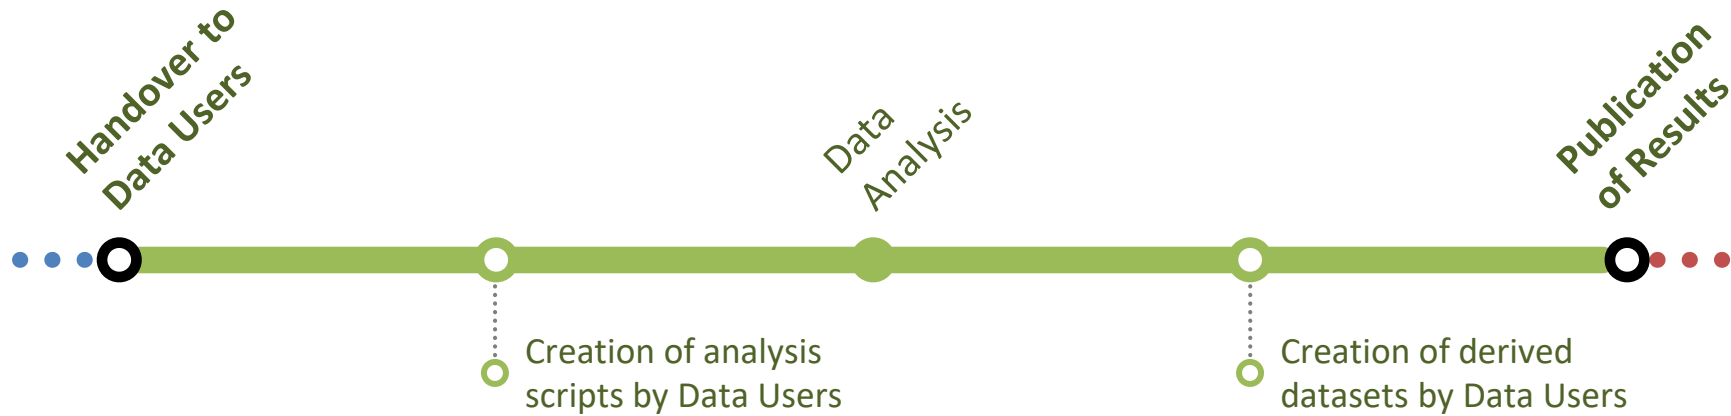

This project has received funding from the European Union's Horizon 2020 research and innovation Programme under grant agreement 945263 (IMMERSE)

# Data Use Process (3)

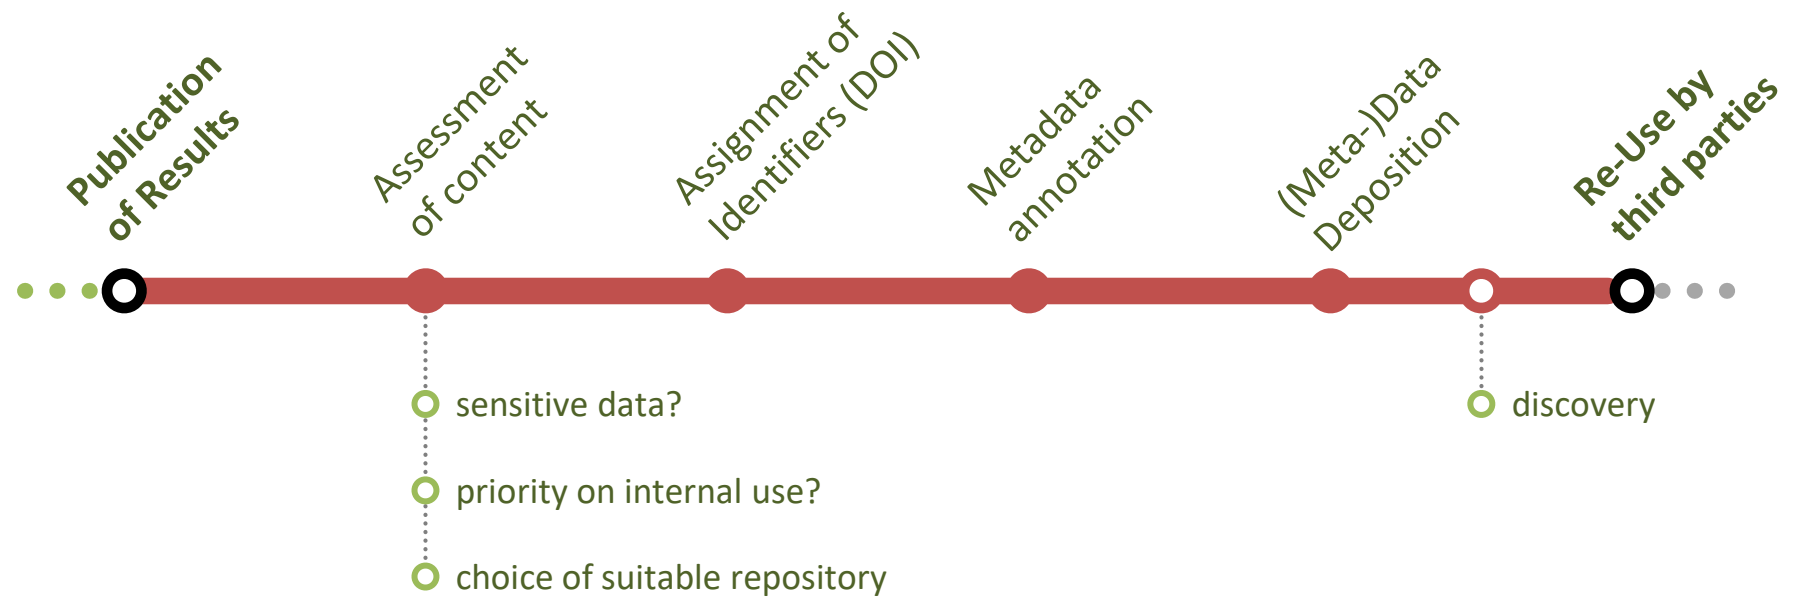

This project has received funding from the European Union's Horizon 2020 research and innovation Programme under grant agreement 945263 (IMMERSE)

This project has received funding from the European Union's Horizon 2020 research and innovation Programme under grant agreement 945263 (IMMERSE)

# Data Use Process (5)

This project has received funding from the European Union's Horizon 2020 research and innovation Programme under grant agreement 945263 (IMMERSE)

# Research Data Management: Next Steps

## Priority from our side

- finalization of import of all source data into SQLite database
- implementation of interface to TherapyDesigner
- finalization of metadata annotation & FHIR conversion

## Requirements from the consortium?

- e.g. extension of dummy data?
- e.g. data quality aspects?
